

Remark

Applicants respectfully request reconsideration of this application as amended. Claims 1-2, 4-7, 9-11, 13-16, 18-22, 24-27, 29-33, 35-37, 39-40, 42-46, 48-49 and 51-61 have been amended. No Claims have been cancelled. Therefore, claims 1-61 are present for examination.

35 U.S.C. §112 Rejection,

The Examiner has rejected claims 1, 19, 30 and 36 under 35 U.S.C. § 112, first paragraph, as failing to comply with the enablement requirement. The limitation has been rewritten to avoid this rejection. The wording is taken from page 27, lines 5-10 of the originally filed application.

35 U.S.C. §102/103 Rejections***Persson et al.***

The Examiner has rejected all of the claims again based primarily Persson et al., U.S. Patent No. 6,647,000 ("Persson"). Applicant respectfully submits that in Persson, the conventional GSM scheme of assigned RACH slots is used, while in the present application the timing relationship to a broadcast burst is used. In this way, for example, an otherwise uninitialized user terminal can send CR without any knowledge of the frequency hopping sequence parameters. (See page 28, pages 14-19.)

The difference between the references and the invention is clear and Applicant looks forward to developing terminology for the claim that spells out this significant difference.
